

EQUIPMENT HIRE

GKI Equipment Hire division supports the Mining, Civil, Industrial and Construction Sectors through our crane, machinery, mine specified hire vehicles and ancillary equipment fleets. Our cranes range in capacity from 20 Ton to 55 Ton providing lifting solutions complimented by our dogging, rigging and scaffolding capability.

All GKI Equipment is backed by our fully qualified service workforce supported by our mobile field servicing units. In the unusual event of breakdown a large range of service spares are kept on hand to ensure prompt dispatch in the event of any unscheduled downtime. Our alliance with key service providers in capital cities and major regional locations ensures professional expertise is at hand at all times.

Access solutions are available through our scaffolding equipment, elevated work platform and boom lift units. Ancillary equipment is available to meet any minor earthmoving and civil works.

In addition, associated tooling, stationary plant and mine specified light vehicles are also available for hire. With the exception of our large cranes, equipment is available on wet or dry hire terms at competitive rates.
